Machine Learning

PyTorch Programming

Dr Chris Willcocks
Department of Computer Science

PyTorch Programming

Durham University

- PyTorch & Colab
  a. Setup
    i. Google Colab
      - ...easier to set up
    ii. NCC / local
      - ...a bit more responsive...
      - visdom
  b. Tensors
    i. Dynamic graph
  c. Devices

https://github.com/cwkx/ml-materials

https://colab.research.google.com/gist/cwkx/d1e5bb1776fd65b00fe2921f59c88871/classifier.ipynb

- Typical approach
  a. Data loaders
  b. Transforms
  c. Networks
    i. Init
    ii. Forward
  d. Setup optimisation strategy
  e. Training
    i. Sample
    ii. Zero grad
    iii. Forward
    iv. Loss
    v. Backward
    vi. Step
  f. Testing
  g. Plotting

$$\theta^{(t+1)} = \theta^{(t)} - \eta \nabla_\theta \mathcal{L}(\theta)$$

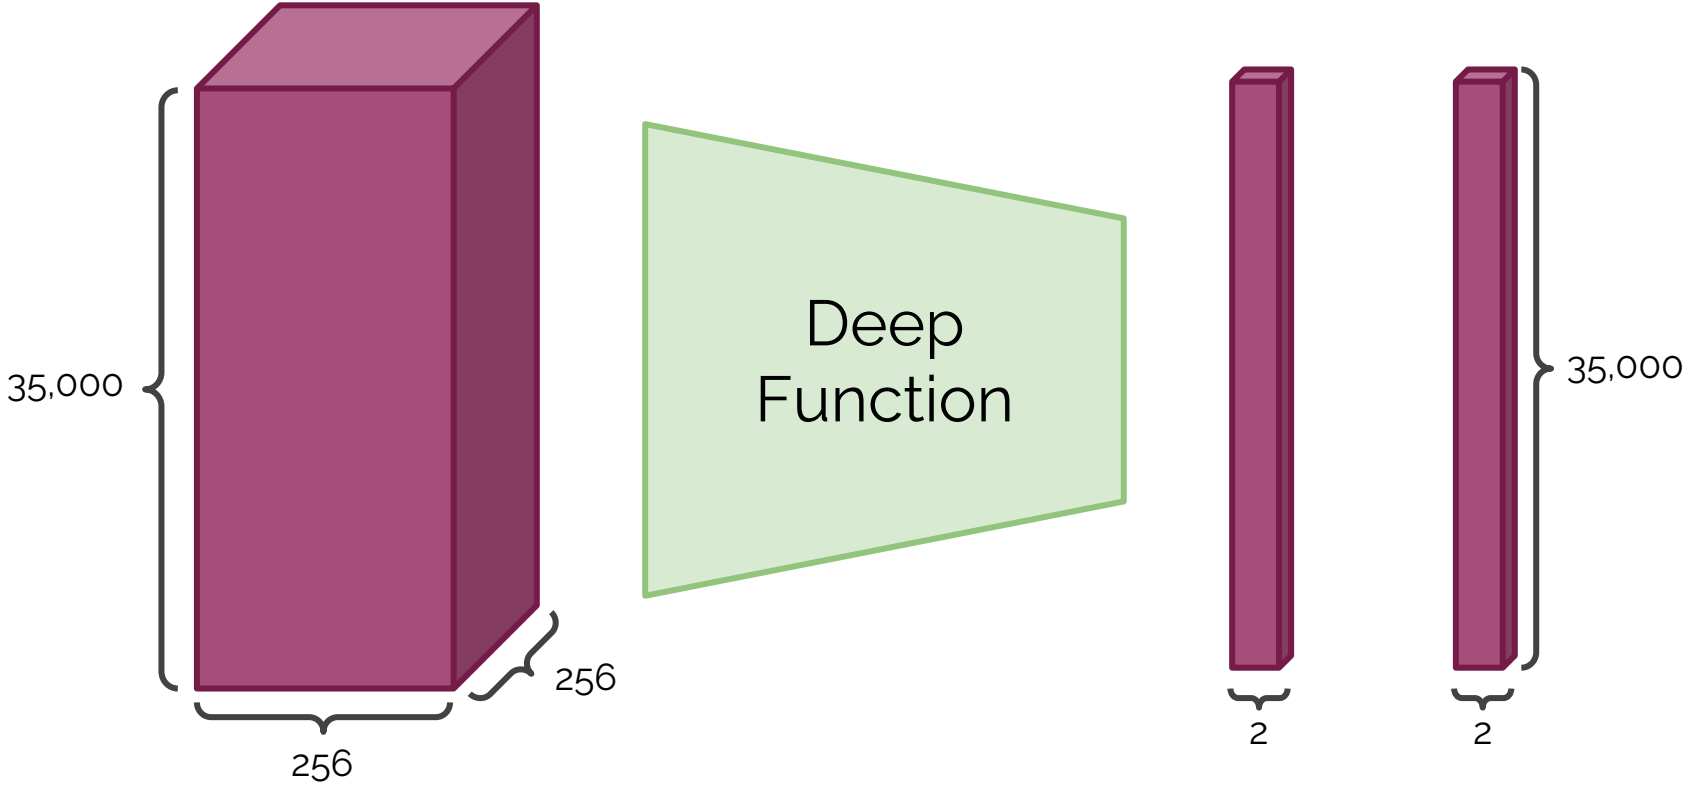
Note: this lecture is a live programming demonstration. The slides are minimal. The material can be downloaded here:

https://github.com/cwkx/ml-materials

The dataset doesn't fit in memory...

Durham University

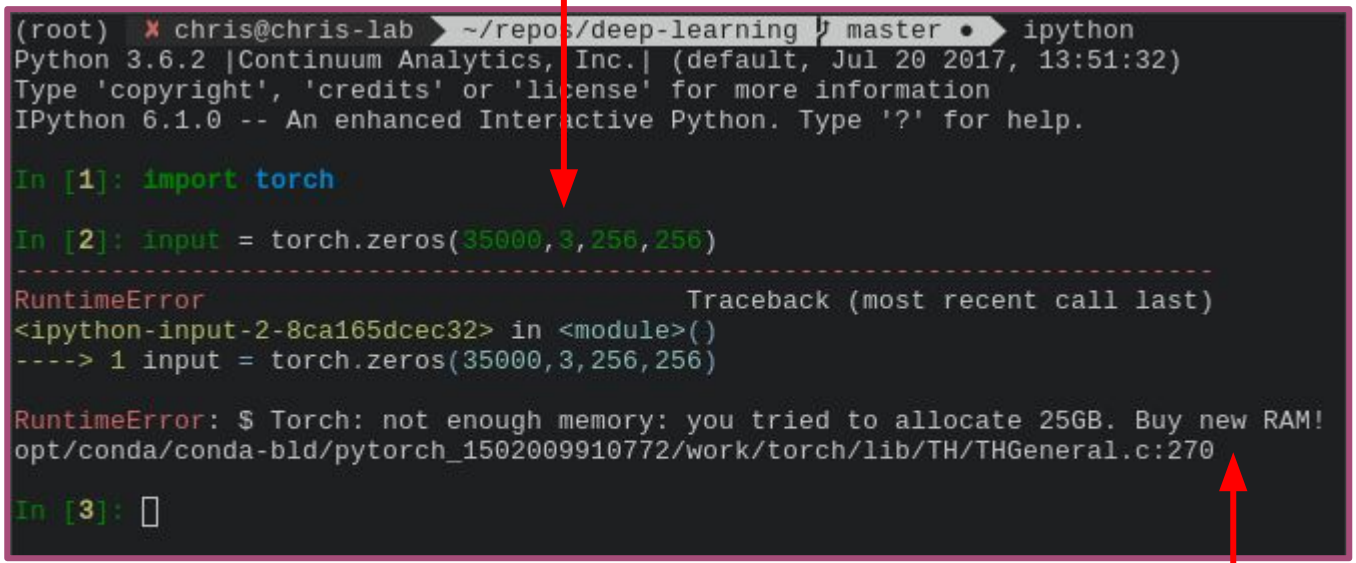
35,000 * 3 * 256 * 256 * (32 bits) = **27.52 gigabytes** *not including the model!*



We run out of memory...

Durham University

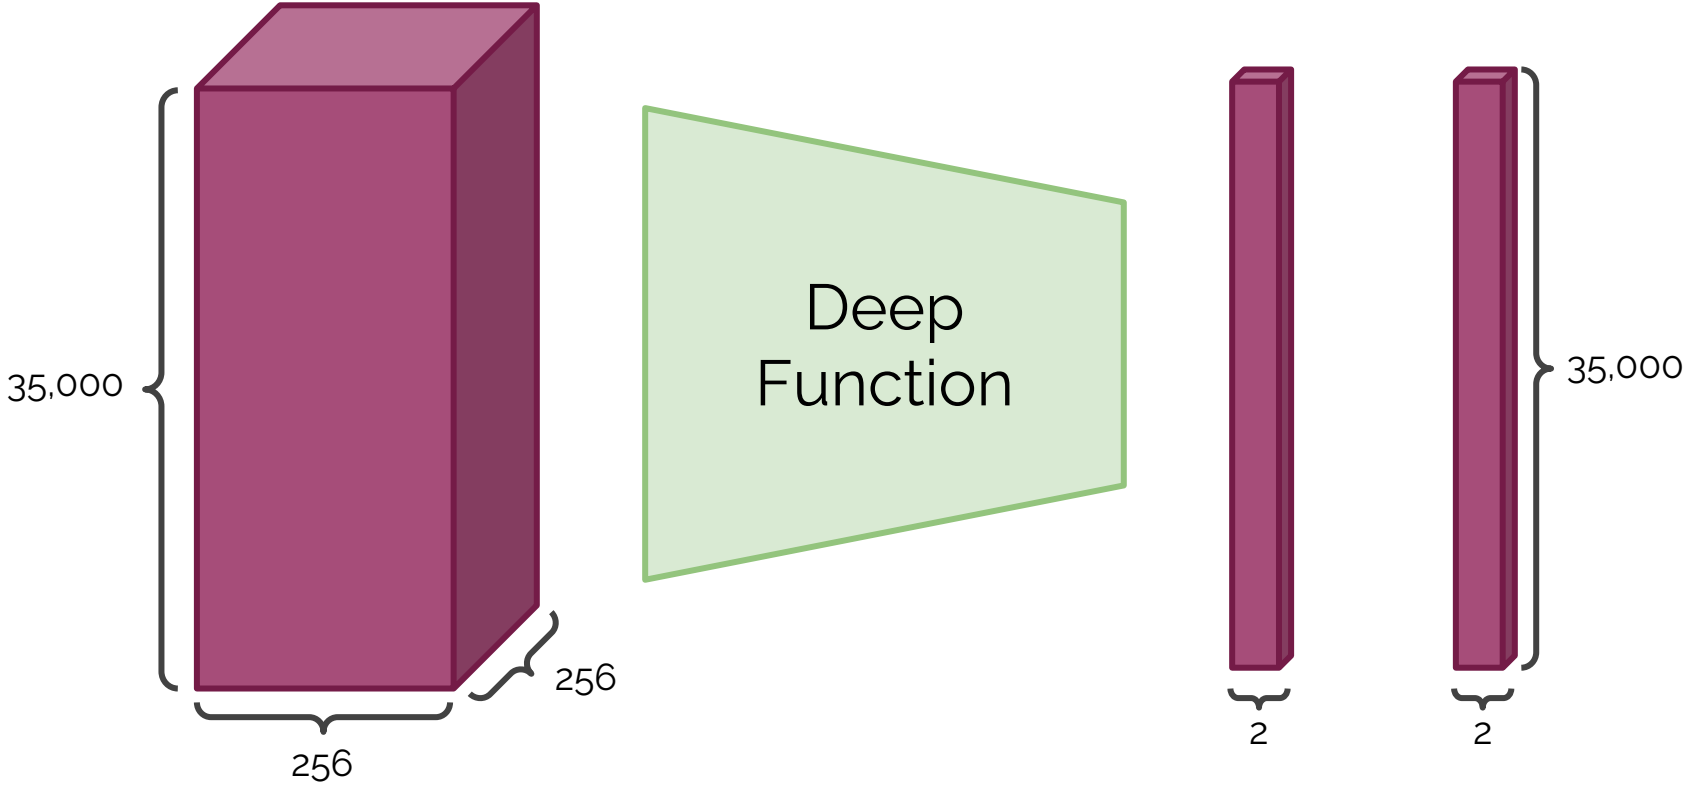
Try and create the tensor



Nope!

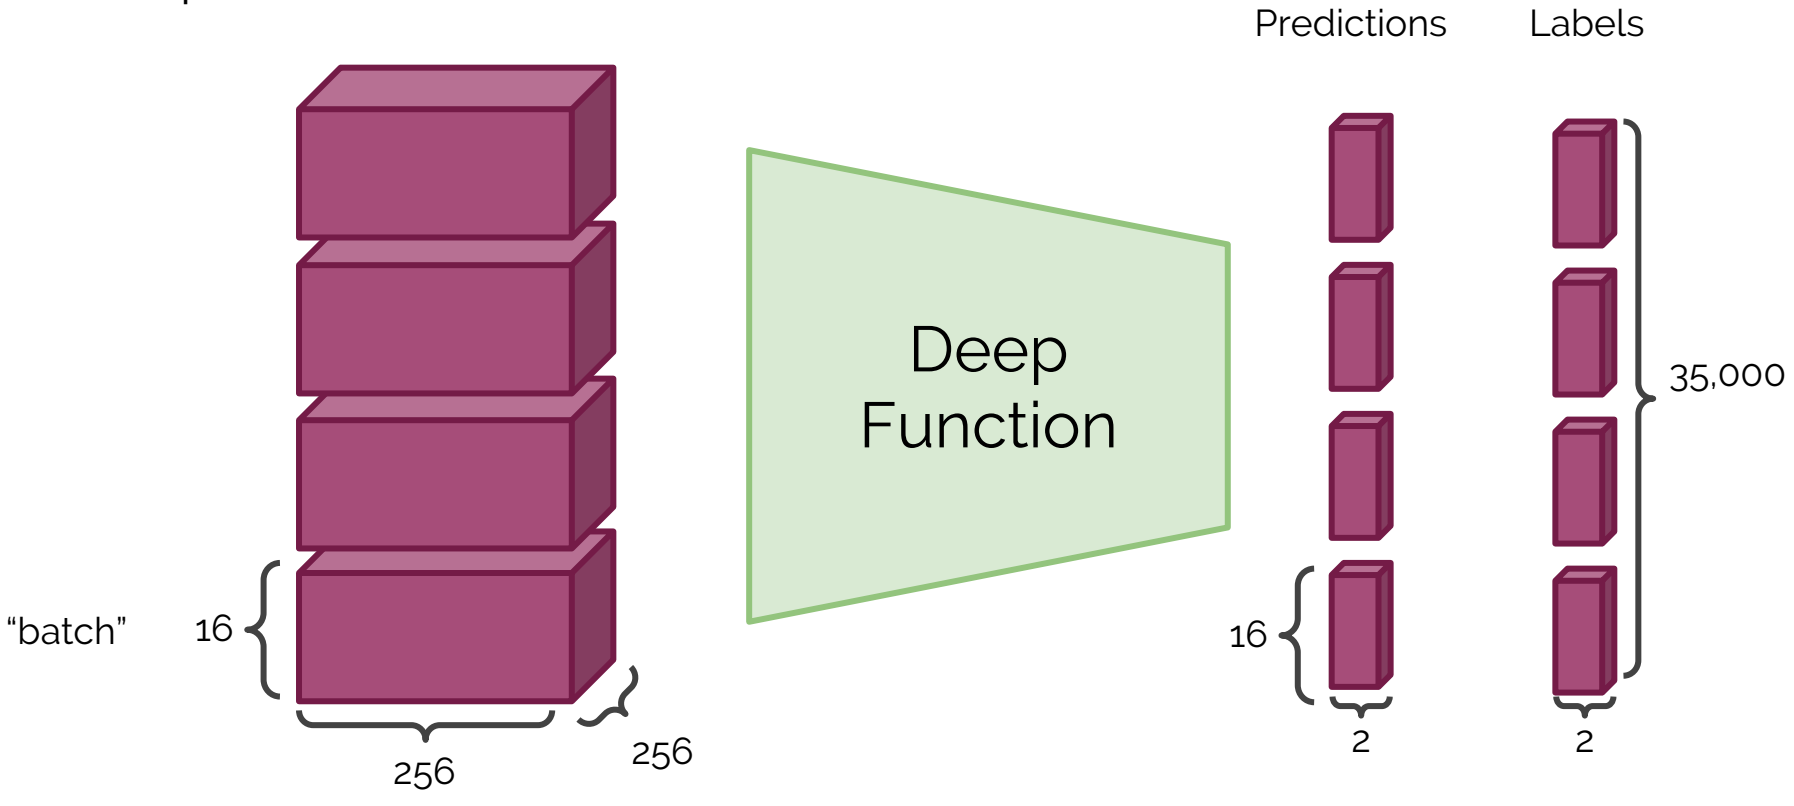
We run out of memory...

35,000 * 256 * 256 * 3 * (32 bits) = **27.52 gigabytes** *not including the model!*



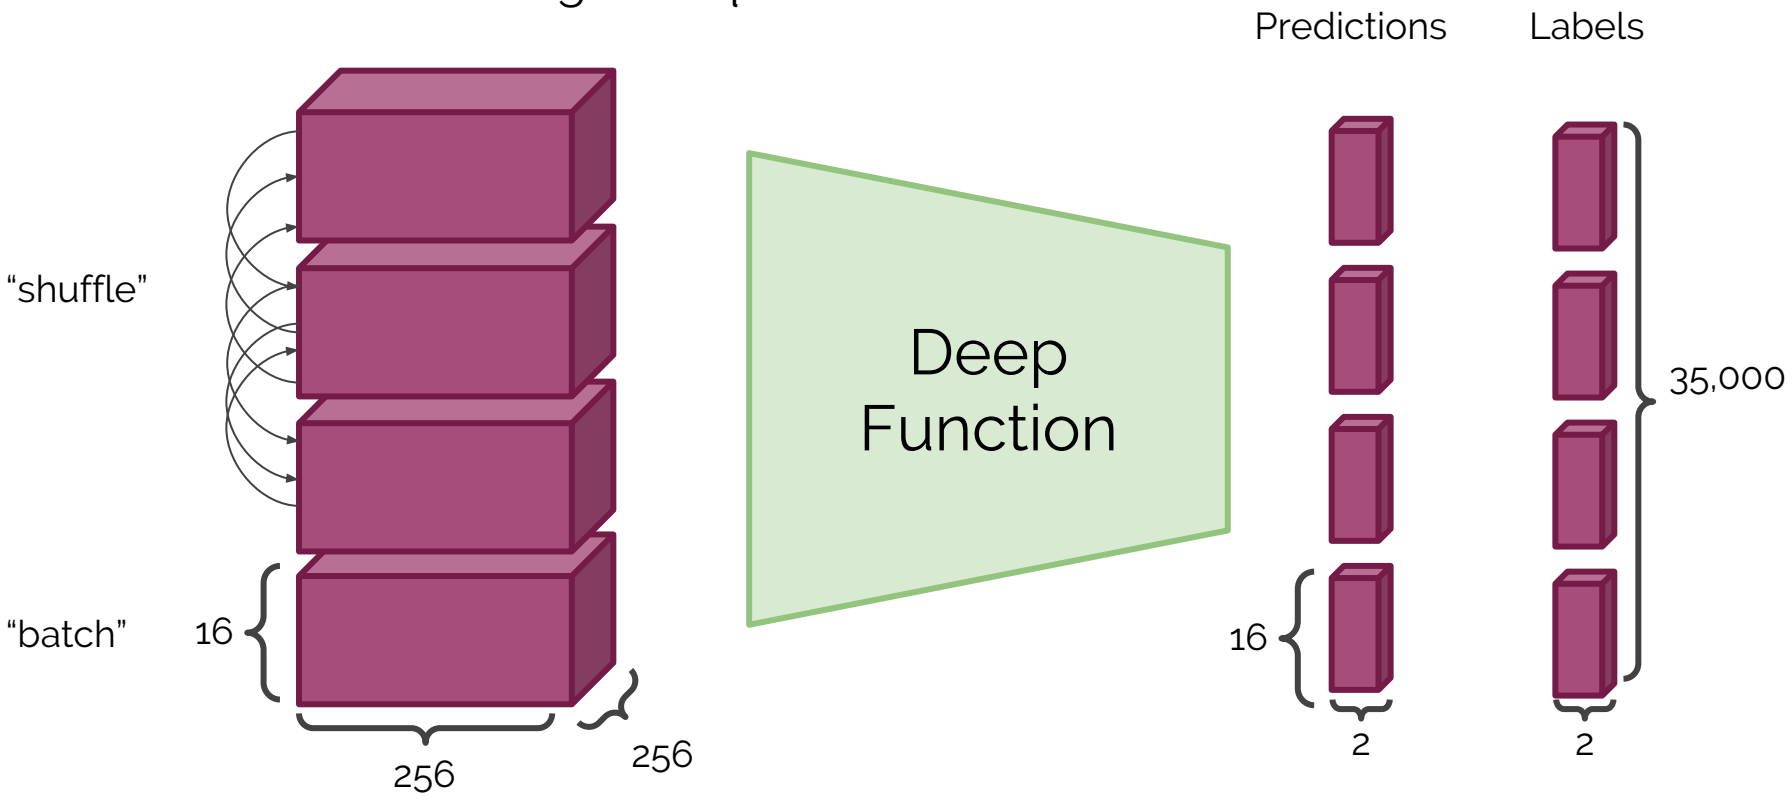
The Data Loader

- Split dataset into mini batches each iteration



The Data Loader

- Shuffle dataset to get unique batches



Mini batches in memory

Durham University
