

Security Practical 4 Answers

Practical 4

The root password is AzsxdcfV9. There are working exploits (i.e. possible answers) in /root/exploit-lab-answers.

Levels 1-3 are reasonably straightforward. Level 1 will be a challenge simply because it is new ground. Levels 2 and 3 build on level 1 (material covered in the lectures).

Level 4 is the trickiest, as it involves bypassing DEP. You will have to create a ROP chain, and will need to look up the Intel instruction set. However, there are hints in the README for that level.
